

LEVEL 01 - COORDINATION PLAN

Visible sheet plus publisher-supplied IFC, IDS and transmittal data

PACKAGE CONTENTS

- 01 coordination-model.ifc
IFC4 / STEP P21
- 02 requirements.ids
IDS 1.0 / XML
- 03 transmittal.json
Issue metadata / JSON

TEST INTENT

- Inventory three unique members
- Emit XML, JSON and STEP selections
- Pass static_text_package_v1

DIGITAL DELIVERY MANIFEST

Exact embedded-member identities and expected PDFValidator behavior

ORIGINAL NAME	DECLARED TYPE	DETECTED TYPE	AF RELATION	TEST PURPOSE	TYPED OUTPUT
coordination-model.ifc	model/step	model/step	Data	IFC4 Part 21 carrier preflight	selected_step_p21
requirements.ids	application/xml	application/xml	Supplement	IDS XML root and exact bytes	selected_xml
transmittal.json	application/json	application/json	Data	Issue metadata and JSON syntax	selected_json

EXACT SELECTOR CONFIGURATION

```
XML  original_filename = requirements.ids
    detected_media_type = application/xml
    xml_root_qname = {http://standards.buildingsmart.org/IDS}ids
JSON original_filename = transmittal.json
    detected_media_type = application/json
STEP original_filename = coordination-model.ifc
    detected_media_type = model/step; FILE_SCHEMA = IFC4
```

EXPECTED OUTCOME

- static_text_package_v1: PASS
- Three unique embedded member byte sequences are inventoried.
- The deterministic extraction bundle contains all three members.
- XML, JSON and STEP selectors each emit exactly one payload.
- Selected bytes are unchanged and independently hashable.
- URI hyperlinks and signatures are outside this validator's scope.

SCOPE NOTE

This fixture validates the PDF package and typed carrier boundary only. It makes no claim of IFC, IDS, PDF/A, design or construction conformance.
Repository-owned synthetic data - CCO-1.0 - no customer, council or project information.
